Body Mass Index (BMI)

The school can verify the analysis of the School Level Body Mass Index screening data conclusions.

Description/Conclusion

The school is utilizing Body Mass Data to improve the health and academic performance of students. Wellness activities will address nutrition education and physical fitness activities for the development of life-long health habits and promotion of a healthy lifestyle for the student, school staff members, parents, and community. Based upon the data analysis, the school will ensure that it provides a pleasant environment and monitor schedules and /or other factors that interfere with students' access to health information and resources. It also guides leadership decisions.

Body Mass Index Data SY 15-16 Overall BMI Classification results for Omaha Elementary School. Approximately 21.7% of males and approximately 23.1% of females were considered overweight or obese. Over the past years 2013-2015 it is a 7.8% decrease in males and 16.2% decrease in females.

Body Mass Index data SY 2014-2015 Overall BMI Classification results for Omaha Elementary School. Approximately 48.3 of males and approximately 47.6% of females were considered to be overweight or obese.

Body Mass Index Data SY 2013-2014 Overall BMI Classification results for the Omaha Elementary School. Approximately 29.5% of males and approximately 39.3% of females measured were considered to be overweight or obese.

Other health and wellness related data (Optional)

Description/Conclusion

School Health Index: 15-16 Overall Score Card indicated the lowest area was Health Promotion for Staff and Family and Community Involvement. After reviewing this, the committee determined that health awareness for staff needs to be encouraged through professional development and assemblies throughout the year for students/families. A Health and Safety Fair will be conducted to promote health awareness in the school community.
